Automatic Logon and ASP.NET Machine Account

Author: Soumitra Sengupta MVP

SYMPTOMS

When a person checks the User accounts he/she finds a strange account,called-"ASP.net" account.

CAUSE

ASP.NET Machine Account is created when the Microsoft .Net Framework 1.1 is installed onto a Windows XP machine.

RESOLUTION

In September 2004 Microsoft released Service Pack 1 for version 1.1 of the .Net Framework, the automatic logon issue was corrected along with further security enhancements, and full support for Windows XP Service Pack 2. To download Service Pack 1 for the framework click here (10.2Mb Download).

Alternatively:-Start > Run and type in "control userpasswords2" >Ok.
Uncheck "Users must enter a user name and password to use this computer" option, and click Ok.

MORE INFORMATION

If one works with asp.net development work then he/she must keep that account,otherwise ASP.net projects will no longer function correctly.

APPLIES TO

- Microsoft Windows XP Service Pack 1
